

AI Automation - Free Preview (Para-Inc)

This is a free sample from the \$10 Para-Inc Starter Pack. The full pack adds the Prompt Engineering Field Manual and the Solo Founder's Systems Kit.

1. The automation shape

Every automation is Trigger -> Logic -> Action. Trigger = an event (new email, cron time, webhook). Logic = filter or branch. Action = the effect (save file, send message, call API).

2. Free stack that works

n8n (self-hosted) for general automation. Ollama for free local LLM inference (no data leaves your machine). Cloudflared for a free public tunnel to expose a local webhook.

3. Example: auto-file invoices

```
Trigger: Gmail label 'Invoices'  
Logic:   extract PDF, ask local LLM for {vendor, amount, due}  
Action:  append row to sheet + rename file
```
