

AI Side-Hustle Playbook

Para-Inc // How to launch a cash-flowing side hustle using free AI tools, even with zero audience.

1. Pick a boring niche

Forget 'AI' as the niche. Pick a group with a recurring pain and money: local service businesses, recruiters, realtors, ecommerce sellers, creators. The niche buys; the AI is the delivery mechanism.

2. Validate before building

Spend \$0 to validate. Post a one-line offer in 3 communities. Count replies that say 'I need this'. 5 real replies = green light. Zero = pivot now, not after you build.

3. Build the offer

Offer = outcome + timeframe + proof. Example: 'I will set up your auto-invoice system in 48h, screenshots included.'

4. Automate delivery

Use n8n or Make to turn the service into a repeatable flow: intake form -> template -> output -> delivery. Each delivery you do by hand once, then template it.

5. Price for profit

Price = (hours saved x client rate) x 3. If you save a business 5 hours/week at \$40/hr, charge \$600/mo, not \$200. Crypto payments remove card fees and chargebacks.

6. The 14-day launch

Day 1-3: pick niche, write offer. Day 4-7: 20 outreach DMs. Day 8-11: deliver first 2 manually. Day 12-14: template + list testimonial.

7. Reinvest the first \$100

Do not withdraw. Spend on better tooling, a domain, or one paid directory listing. Compounding beats cash in hand.

8. Avoid the treadmill

If a client needs you live every week, productize it. Turn the service into a template, course, or automated bot. Your goal is leverage, not hours.
